WWF-CDNX

Winfield Resources Limited (the “Company”, WWF-CDNX) is pleased to announce that it has entered into a farm-in agreement with group of private Alberta registered companies to exploit oil and gas assets in east central Alberta.

In the agreement, Winfield would acquire petroleum and natural gas rights to lands in Provost, Alberta and would have the option to participate in the drilling of a step out well, targeting Sparky oil or Viking gas.

Winfield will earn a 60% interest in the property by drilling a new offset well and by making a payment of 100,000 common shares of the issuer.

The area is predominately known for stacked producing zones; including Viking, Sparky, Glauconitic and Ellerslie sands. Four offsetting gas wells within a one mile radius have produced cumulative gas volumes of 0.1 – 0.8 Bcf with initial rates of 300 – 600 mcf/d. An additional Sparky oil well is on production with a minimal decline and stable production rates.

Winfield Resources Limited is a Canadian based petroleum company focused on Discovered Reserve Opportunities in the Western Canadian Sedimentary Basin.

On Behalf of the Board of Directors,
WINFIELD RESOURCES LIMITED

“Michael Foley” President
